

اسپکٹرومٹر Spectrometer

Descriptions:

For observing and measuring emission and absorption spectra . with a precise scale for measuring the angle of deflection for prisms and gratings; thus also suitable for determining the refractive index and mean dispersion. With an adjustable slit, condenser , telescope. A holder for metal line grating can be used instead of the prism table .

Specifications :

Grating holder : 50 mm × 30 mm •
Angular scale : 0 to 360 with 1
divisions • Accuracy < 60 vernier

Warranty : One year

After sales service : Ten years
