

Core Cutting Saw

Core cutting saw is a full diameter cross cut saw with dual-purposes functions. It consists of a saw with wet-cutting head, ball-bearing assembly arbor, potential Sta Level cast aluminum blade guard for diamond tooled saw blades up to 14 inches in diameter. Suitable for use with cores up to 8 inches in diameter and 320 mm in length depending on model and blade size selected. The blade height is adjustable over a vulcanized rubber top worktable, which moves smoothly on ball bearing guide wheels riding along the length of the coolant fluid pan. The saw is provided with one saw blade. Unless otherwise specified the blade will be 14 inches in diameter with 1-inch arbor.

The standard electric motor is 220 VAC, 60 HZ, and single phase. The saw assembly is 70 cm high, 65 cm wide, 120 cm long and weighs 120 kg. Includes a core guide and clamp assembly for holding core for smooth slabbing operation. Liquid coolant pump included for fluid recirculation.
