Non Destructive Testing Device

SONEX ultrasonic non-destructive test device, is designed to excite and use the ultrasonic NDT probes with the center frequencies of 1 to 10 MHz. This device is capable of producing “Spike” and “Burst” modes of excitation with the maximum voltage of 250Vdc and it includes high frequency amplifiers and filters for processing the received signals. To digitalize the received signals, an ADC with the sampling frequency of 65 MHz and 12 bits of resolution is used. The LCD and the keys have been designed to easily control the excitation and see the resulting signals.

The designed and manufactured ultrasonic Non-Destructive Test probes have the center frequencies of 1 and 2 MHz and can be used to show the Cracks, holes and other imperfections in Steel with a resolution of 500 micrometers.

- 7-inch screen
- Battery with the ability to operate 6-8 hours of continuous operation.
- Charging with 15-volt adapter
- Ability to generate excitation pulses in two modes, Spike and Burst
- Adjust the excitation voltage from 60 to 200 volts
- Designed for ultrasonic probes from 0.5 MHz to 10 MHz
- Signal averaging up to 128x
- Has FIR digital filter in Wideband modes and frequencies of 2, 5, 8 and 10 MHz
- Adjust the received gain up to 80 dB (10,000 times) in 3 dB steps
- Gate for pointing and distance in the chart
- Adjustable detection interval with an adjustable delay of twice the interval
- Capable of recording 6 points for the DAC chart and display simultaneously with the data
- Support for AWS standard
- Ability to calibrate the time axis and calculate the sound speed of the material and the delay of the probe
- Standard Lemo connectors
- Ability to save settings, DAC charts and AWS in internal memory

Applications

- Chemical industry
- Petrochemical industry
- Oil and gas industry
- Construction Industry
- Steel industry
- Casting industry

One year warranty and 10 years after-sales services
